

## MediaPulse 2019

New User Interface, MediaPulse Managed Cloud and Hundreds of New Features

### MediaPulse

The 2019 release of MediaPulse is the most significant update in our thirty-year history of innovation. There are hundreds of new features with a focus on two critical areas: a consumer grade user experience and amazing cloud performance.

The User Interface is completely redesigned to support everyone from power users, to light touch users as well as providing a portal experience for your freelancers, vendors and clients. MediaPulse now has a beautiful, intuitive interface for every user, every workflow and every task.

For our current clients, please contact your support representative for a complete release log and upgrade services information.

### New Features

- Redesigned responsive interface for any browser on any device
- Instant Search Results
- MediaPulse Mobile for targeted mobile use
- Supports OpenID, SSO and Okta

# MediaPulse 2019

## MediaPulse Sky UI

The MediaPulse Sky user interface has undergone a complete reimaging of the user experience for a clean, modern and consumer grade look. The beautiful new UI is also responsive and appropriate for any browser on any device. This new update contains amazing performance improvements including our new Limitless Scrolling, providing instant searches regardless of the size of the result set.

## MediaPulse Managed Cloud

The MediaPulse Managed Cloud is provided through Microsoft's Azure for a safe, secure and scalable experience. This allows Xytech to manage your infrastructure so you can manage your business. Single Sign-On with Open ID is supported for quick onboarding of users.

## MediaPulse Mobile

MediaPulse Mobile has specific modules tailored to a single user on a handheld device. Your staff can now manage their bookings easily and quickly eliminating confusion, emails and calls. Timecard functionality makes it incredibly convenient for staff to enter their time and associate it to any number of jobs.

## RESTful API

Our new RESTful APIs make connecting to any system easy, economical and flexible. The SOAP API is still supported, so there is no need to rewrite anything you've done.
